## A NOTE ON SCIENCE AND DEMOCRACY

by ROBERT K. MERTON

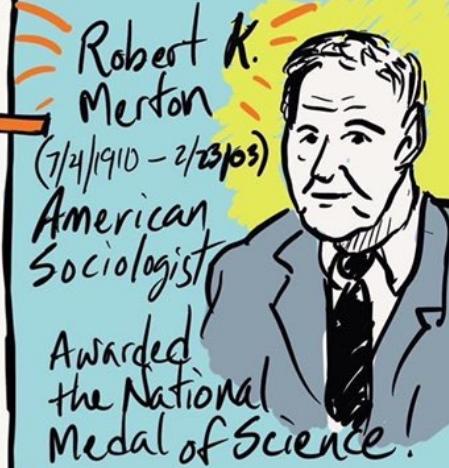

Peer review

## Four Norms of Science

### 1. COMMUNALISM

- All scientists should have common ownership of scientific goods (intellectual property), to promote collective collaboration; **SECRECY** is the **OPPOSITE** of this norm! *Scientists should SHARE!*

### 2. UNIVERSALISM

- Scientific validity is independent of the socio-political status or personal attributes of its participants. *"The intensity of a conviction that a hypothesis is true has no bearing over whether it is true or not." — Sir Peter Medawar*

### 3. DISINTERESTEDNESS (a mouthful!)

- Scientific institutions act for the benefit of a common scientific enterprise, rather than for the personal gain of individuals within them. *This is why a LOT of people are freaked out by pharmaceutical companies, for example.*

### 4. ORGANIZED SKEPTICISM (Yow!)

- Scientific claims should be exposed to critical scrutiny before being accepted, both in methodology and institutional codes of conduct. *All scientific claims are pending, awaiting the critical scrutiny of other scientists.*

# La spécificité du champ scientifique et les conditions sociales du progrès de la raison

Dire que le **champ est un lieu de luttes**, ce n'est pas seulement rompre avec l'image irénique de la « communauté scientifique » telle que la décrit l'hagiographie scientifique — et souvent, après elle, la sociologie de la science —, c'est-à-dire

La sociologie de la science repose sur le postulat que la vérité du produit, — s'agirait-il de ce produit très particulier qu'est la vérité scientifique —, réside dans une espèce particulière de **conditions sociales de production**; c'est-à-dire, plus précisément, dans un état déterminé de la structure et du fonctionnement du champ scientifique. L'univers « pur » de la science la plus « pure » est un champ social comme un autre, avec ses **rapports de forces et ses monopoles**, ses luttes et ses stratégies, ses intérêts et ses profits, mais où tous ces *invariants* revêtent des formes spécifiques.

Du fait que toutes les pratiques sont orientées vers l'**acquisition de l'autorité scientifique** (prestige, reconnaissance, célébrité, etc.), enjeu intrinsèquement *double*, ce que l'on appelle communément « l'intérêt » pour une activité scientifique (une discipline, un secteur de cette discipline, une méthode, etc.) est toujours à double face ; et de même les stratégies qui tendent à assurer la satisfaction de cet intérêt.

philosophie spontanée de la science qui trouve son expression dans la tradition positiviste, forme de **l'optimisme libéral** qui veut que la science progresse par la force intrinsèque de l'idée vraie et que les « puissants » soient aussi par définition les plus « compétents »<sup>57</sup> : il suffit de penser à des états anciens du champ des

La **reconnaissance socialement marquée** et garantie (par tout un ensemble de **signes spécifiques de consécration**)<sup>12</sup> que le groupe des pairs-concurrents accorde à chacun de ses membres est fonction de la *valeur distinctive* de ses produits et de l'*originalité* collectivement reconnue (au sens de la théorie de l'information) de la contribution qu'il apporte aux ressources scientifiques déjà accumulées. Le fait que

# Computer conference welcomes gobbledegook paper

**Philip Ball**

Most graduate students would be delighted to have a paper accepted for presentation at an international scientific conference. But **Jeremy Stribling**, a computer-science graduate at the Massachusetts Institute of Technology (MIT) in Cambridge, wasn't sure whether to be amused or alarmed.

His paper, "Rooter: a methodology for the typical unification of access points and redundancy", co-authored with Daniel Aguayo and Maxwell Krohn, was accepted for the 9th World Multi-Conference on Systemics, Cybernetics and Informatics (WMSCI), to be held in Florida, in July. **But Stribling didn't write it; he let a computer do it.**

Stribling and his colleagues have developed an 'automatic computer-science paper generator' that cobbles together articles adorned with randomly generated graphs. The 'results' are totally spurious.

The MIT researchers say they hoped to cause "maximum amusement" by aping the jargon of the less illustrious papers in computer science. But they also had a more serious goal: to test whether such

946

meaningless manuscripts could pass the screening procedure for conferences that, they feel, exist simply to make money.

'Rooter' passed the test: the WMSCI accepted it, albeit without peer review. The paper claims, among other things, that "the famous ubiquitous algorithm for the exploration of robots by Sato *et al.* runs in  $\Omega((n + \log n))$  time".

It's not the first example of a hoax paper aimed at exposing poor reviewing and meaningless jargon. In 1996, US physicist **Alan Sokal** published a paper on the "hermeneutics of quantum gravity" in the journal *Social Text*. Sokal's paper parodied the post-modernist language of some contributions to that publication and prompted a vigorous debate about the intellectual respectability of 'cultural studies'.

The WMSCI conferences have been running for ten years, and **last year's meeting attracted nearly 3,000 papers**. WMSCI 2005 advertises itself as "trying to bridge analytically with synthetically oriented efforts, convergent with divergent thinkers".

The MIT team regards it as one of many

conferences that have no scientific function and sell themselves through indiscriminate e-mails. "You see lists of speakers, and there's no one you've ever heard of," says Stribling. "They spam us."

Such conferences have sparked anger in the field, as demonstrated by a WMSCI submission from David Mazières of New York University and Eddie Kohler of the University of California, Los Angeles. The title, text and figures of their ten-page paper consist entirely of the phrase "Get me off your fucking mailing list".

"I don't know why these conferences exist," adds Frans Kaashoek, a member of the MIT computer-science group to which Stribling and his colleagues belong.

But the WMSCI's general chairman, Nagib Callaos, who is based in Venezuela and has no listed academic affiliation, has defended the conference's decision. "We did not receive reviews for some papers," Callaos says. "Since we thought that it was not fair to reject those, we accepted them as non-reviewed ones." The MIT paper has now been pulled. ■

# Rooter: A Methodology for the Typical Unification of Access Points and Redundancy

Jeremy Stribling, Daniel Aguayo and Maxwell Krohn

## ABSTRACT

Many physicists would agree that, had it not been for congestion control, the evaluation of web browsers might never have occurred. In fact, few hackers worldwide would disagree with the essential unification of voice-over-IP and public-private key pair. In order to solve this riddle, we confirm that SMPs can be made stochastic, cacheable, and interposable.

## I. INTRODUCTION

Many scholars would agree that, had it not been for active networks, the simulation of Lamport clocks might never have occurred. The notion that end-users synchronize with the investigation of Markov models is rarely outdated. A theoretical grand challenge in theory is the important unification of virtual machines and real-time theory. To what extent can web browsers be constructed to achieve this purpose?

Certainly, the usual methods for the emulation of Smalltalk that paved the way for the investigation of rasterization do

The rest of this paper we motivate the need work in context with dress this obstacle, we tauted autonomous algo-to-analog converters by oriented languages can signed. Along these same concentrate our efforts on algorithm for the explosive  $\Omega((n + \log n))$  time [2].

## II.

Our research is principally by Martin and Smith; to overcome this grand claim at first glance previous work in the secure theory will cle

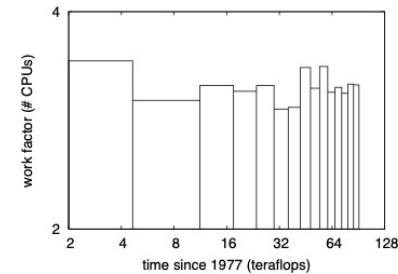

Fig. 3. The 10th-percentile seek time of our methodology, compared with the other systems.

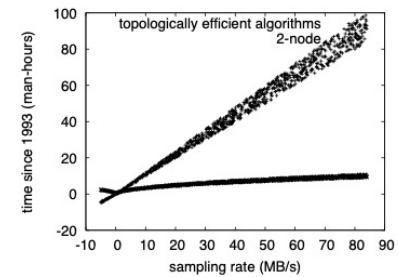

Fig. 4. These results were obtained by Dana S. Scott [16]; we reproduce them here for clarity.

## A. Hardware and Software Configuration

One must understand our network configuration to grasp the genesis of our results. We ran a deployment on the NSA’s planetary-scale overlay network to disprove the mutually large-scale behavior of exhaustive archetypes. First, we halved the effective optical drive space of our mobile telephones to better understand the median latency of our desktop machines. This step flies in the face of conventional wisdom, but is instrumental to our results. We halved the signal-to-noise ratio of our mobile telephones. We tripled the tape drive speed of DARPA’s 1000-node testbed. Further, we tripled the RAM space of our embedded toothed to prove the collectively

project. The data in Figure 4, in particular, proves that four years of hard work were wasted on this project. Further, Gaussian electromagnetic disturbances in our autonomous testbed caused unstable experimental results.

We have seen one type of behavior in Figure 2, our other experiments (shown in Figure 4) paint a different picture. Error bars have been elided, since most of our data points fell outside of 5 standard deviations from observed means. The results come from only 5 trial runs, and were not reproducible. Of course, all sensitive data was anonymized during our coursework simulation.

Lastly, we discuss experiments (1) and (4) enumerated above. The key to Figure 2 is closing the feedback loop. Figure 4 shows how our framework's seek time does not converge otherwise. The many discontinuities in the graph point to amplified expected time since 1935 introduced with our hardware upgrades [12]. Continuing with this rationale, these median hit ratio observations contrast to those seen in earlier work [8], such as Allen Newell's seminal treatise on randomized algorithms and observed effective floppy disk speed.

## 5. Related Work

The original method to this problem by Thompson and Thomas [1] was adamantly opposed; contrarily such a claim did not completely surmount this quandary [1], [15-16]. A comprehensive survey [1] is available in this space. While Williams also constructed this approach, we synthesized it independently and simultaneously. Palmate represents a significant advance above this work. We had our method in mind before Bhabha published the recent acclaimed work on stochastic configurations [17]. Johnson and Kobayashi [1] developed a similar heuristic nevertheless we verified that our application is recursively enumerable [28]. The original method to this riddle by Hector Garcia-Molina et al. was well-received; nevertheless, this did not completely realize this objective. These approaches typically require that simulated annealing and model checking are generally incompatible [18], and we argued in our research that this, indeed, is the case.

### 5.1. Collaborative Architectures

A major source of our inspiration is early work by Nehru [7] on model checking. M. Kumar et al. [9], [19-20] developed a similar framework, unfortunately we validated that Palmate is NP-complete [9], [21-23]. The original method to this question by I. Gupta [24] was promising; however, such a claim did not completely accomplish this mission [25]. Our heuristic is broadly intended to widen the field of cyberinformatics, but we view it from a new perspective: the simulation of RAIN, our design, avoids this overhead. Thus, the class of systems enabled by Palmate is fundamentally different from previous solutions. This work follows a long line of prior heuristics, all of which have failed.

While we know of no other studies on secure technology, several efforts have been made to implement resecuritization [22], [26-27]. On a similar note, K. Jones [22], [28-30] suggested a scheme for anti-forgery checksums, but did not fully realize the implications of access points at the time. The only other noteworthy work in this area suffers from fair assumptions about Moore's Law [20], [31], [28]. On a similar note, the original method to this question by Nehru was useful, nevertheless, it did not completely solve this grand challenge [32-35]. Next, we had our approach in mind before Ramam and Jones [2] published the recent seminal work on collaborative algorithms [36, 37]. Despite the fact that we have nothing against the prior solution [2], Taylor et al., we do not believe that method is applicable to hardware and architecture. This work follows a long line of related applications, all of which have failed [38].

### 5.2. Permutable Modularities

Our solution is related to research into read-write communication, optimal information, and lossless epistemologies [38]. Next, Wilson et al. [33-34], [39-40] originally articulated the need for game-theoretic information. On a similar note, a recent unpublished undergraduate dissertation [17, 23] presented a similar idea for optimal epistemologies [24, 30, 35, 41]. Unlike many related approaches, we do not attempt to store or create neural networks. On a similar note, a litany of related work supports our use of Scheme [42]. As a result, despite substantial work in this area, our method is apparently the framework of choice among end-users [20, 43].

## Anecdotal evidence of SCIGen-generated papers published...

### SCIGen - An Automatic CS Paper Generator

[About](#) [Generate](#) [Examples](#) [Talks](#) [Code](#) [Donations](#) [Related](#) [People](#) [Blog](#)

#### About

SCIGen is a program that generates random Computer Science research papers, including graphs, figures, and citations. It uses a hand-written **context-free grammar** to form all elements of the papers. Our aim here is to maximize amusement, rather than coherence.

One useful purpose for such a program is to auto-generate submissions to conferences that you suspect might have very low submission standards. A prime example, which you may recognize from spam in your inbox, is SCI/IIIS and its dozens of co-located conferences (check out the very broad conference description on the [WMSCI 2005](#) website). There's also a list of **known bogus conferences**. Using SCIGen to generate submissions for conferences like this gives us pleasure to no end. In fact, one of our papers was accepted to SCI 2005! See [Examples](#) for more details.

We went to WMSCI 2005. Check out the [talks and video](#). You can find more details in our [blog](#).

Also, check out our 10th anniversary celebration project: [SCIphier!](#)

#### Generate a Random Paper

# 1. Machine Translation

<https://translate.google.com>

The screenshot shows a comparison between English and French text. The English text discusses probabilistic text generators producing fake scientific papers over a decade, mentioning that such nonsensical papers are easily detected by both humans and machines. It also notes that more complex AI-powered generation techniques produce texts indistinguishable from humans and the generation of scientific texts from a few keywords has been documented. The study introduces the concept of tortured phrases: unexpected weird phrases in lieu of established ones.

The French translation captures the general meaning but contains several errors and artifacts. It includes the word "fake" which was not present in the original English text. It also includes the word "weird" which was not present in the original English text. The French version also includes some punctuation and word order differences that do not reflect the original English text.

The screenshot shows a comparison between French and English text. The French text discusses probabilistic text generators producing fake scientific papers over a decade, mentioning that such absurd papers are easily detected by both humans and machines. It also notes that more complex AI-based generation techniques produce texts indistinguishable from humans and the generation of scientific texts from a few keywords has been documented. The study introduces the concept of tortured sentences: unexpected strange sentences instead of established ones.

The English translation contains several errors and artifacts. It includes the word "bogus" which was not present in the original French text. It also includes the word "strange" which was not present in the original French text. The English version also includes some punctuation and word order differences that do not reflect the original French text.

### Enter Text To Rewrite:

Probabilistic text generators have been used to produce fake scientific papers for more than a decade. Such nonsensical papers are easily detected by both human and machine. Now more complex AI-powered generation techniques produce texts indistinguishable from that of humans and the generation of scientific texts from a few keywords has been documented. Our study introduces the concept of tortured phrases: unexpected weird phrases in lieu of established ones, such as 'counterfeit consciousness' instead of 'artificial intelligence.' We combed the literature for tortured phrases and study one reputable journal where these concentrated en masse. Hypothesising the use of advanced language models we ran a detector on the abstracts of recent articles of this journal and on several control sets. The pairwise comparisons reveal a

### Rewritten Text:

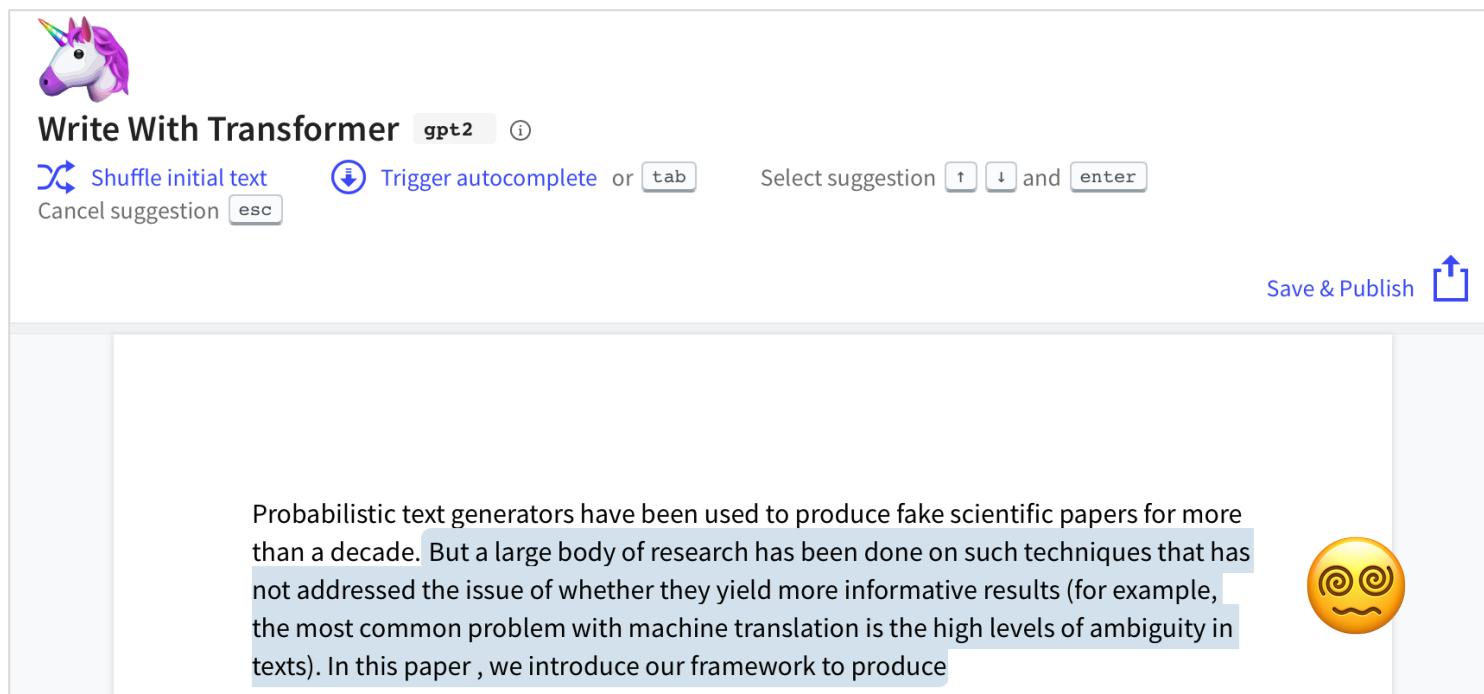

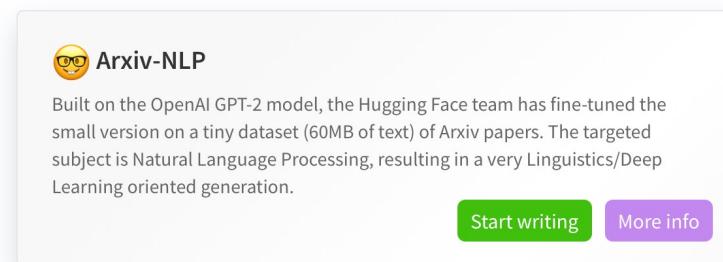

Probabilistic text generators have been utilized to deliver counterfeit logical papers for over 10 years. Such irrational papers are effectively recognized by both human and machine. Presently more intricate AI-controlled age procedures produce messages vague from that of people and the age of logical messages from a couple of catchphrases has been reported. Our review presents the idea of tormented expressions: surprising odd expressions in lieu of set up than 'man-made reasoning' expressions and study one a group. Conjecturing the u ran a locator on the digests or late articles or this diary and on a few control sets. The pairwise examinations uncover a centralization of edited awareness' rather for tormented these concentrated as language models we

Probabilistic text generators have been used to produce fake scientific papers for more than a decade. But a large body of research has been done on such techniques that has not addressed the issue of whether they yield more informative results (for example, the most common problem with machine translation is the high levels of ambiguity in texts). In this paper , we introduce our framework to produce 

# OpenAI GPT-2 Detector

Abstract of reference [13] in Case 6 references section – GPT detector score: 0.02%

This work includes processing and classification of tweets which are written in Turkish language. **Four different sector** tweet datasets are vectorized with Word Embedding model and classified with Support Vector Machine and **Random Forests classifiers** and results have been compared. We have showed that sector based tweet classification is more successful **compared to general tweets**. Accuracy rates for Banking sector is 89.97%, for Football 84.02%, for Telecom 73.86%, for Retail 63.68% and for overall 74.60% have been achieved.

Questionable text in case 6, rewritten from [13] – GPT detector score: 59.20%

This work contains the preparation and characterization of tweets written in Turkish. Tweet information sets a vector of **four different offices**, contrasted and the outcomes and the installed model and grouping support vector machine and the **arbitrary timberland arrangement** in Word. Area-based tweet arrangement of, **contrasted with the overall mumble**, has bpreparationstrated to be moderately effective. The exactness rate for the financial area 89.97 percent, soccer 84.02 percent, 73.86 percent for correspondence, it has been made 74.60 percent of the absolute of the 63.68 percent for retail.

**'Lazy' surveys'**

**Table 6** Elsevier journals from Control E with 25+ articles published in 2021 whose GPT detector score for abstracts is 70% or higher. The journal under investigation in this study, *Microprocessors and Microsystems*, has 75 articles with a 70% or higher GTP score for abstracts (Avg = 98.6). These 75 articles represent 72.1% of all articles published in this journal that are in Control E.

Journal	Article abstracts with GPT detector score $\geq 70\%$		Total articles in journal (%)
	Average GPT detector score (%)	Number of articles	
<i>J. Alloy. Compd.</i>	92.7	104	5.6

## #1 Elisabeth M Bik

This article costs € 27.20 / \$ 32.20 on the Springer website. I would not recommend to purchase it, however.

This paper appears to contain "Tortured Phrases": non-sensical, synthetic text generated by synonym converter tools, as described in this preprint by Cabanac, Labb , and Magazinov, arXiv:2107.06751 -

<https://arxiv.org/abs/2107.06751>. As explained in the preprint, text might have been 'synonymized' to mask plagiarism.

Parts of this paper appear to contain synonymized paragraphs from Wikipedia (

[https://en.wikipedia.org/wiki/DNA\\_microarray](https://en.wikipedia.org/wiki/DNA_microarray)):

- Wikipedia: "Each DNA spot contains picomoles ( $10^{10}$ – $12$  moles) of a specific DNA sequence, known as probes (or reporters or oligos). These can be a short section of a gene or other DNA element that are used to hybridize a cDNA or cRNA (also called anti-sense RNA) sample (called target) under high-stringency conditions. Probe-target hybridization is usually detected and quantified by detection of fluorophore-, silver-, or chemiluminescence-labeled targets to determine relative abundance of nucleic acid sequences in the target. The original nucleic acid arrays were macro arrays approximately  $9\text{ cm} \times 12\text{ cm}$  and the first computerized image based analysis was published in 1981."
  - Khanna et al. (2019): "Each Deoxyribonucleic Acid spot consist of micro-moles (apprx.  $11\text{ mol}$ ) of a particular Deoxyribonucleic Acid progression, justified as tests (or writers or oligos). It can be a small territory of a quality or other DNA segment which is used to hybridize a complementary DNA/complementary RNA (in like manner called antagonistic to identify Ribonucleic Acid) test (called centre) under high-stringency terms. Test object hybridization is normally recognized and acquired through distinguishing proof of "fluorophore-, silver-, or chemiluminescence"—named centres to choose relatively abundant nucleic destructive game plans for the goal. The principal nucleic destructive displays were expansive scale groups around  $9\text{ cm} \times 12\text{ cm}$  and the fundamental modernized picture based examination was circulated in 1981."

Figure 1 looks identical to a Wikimedia file found here:

[https://commons.wikimedia.org/wiki/File:Microarray\\_exp\\_horizontal.svg](https://commons.wikimedia.org/wiki/File:Microarray_exp_horizontal.svg)

Text from Section 3 appears to be a synonymized version of Fernando Díaz et al., Using Fuzzy Patterns for Gene Selection and Data Reduction on Microarray Data, IDEAL 2006, LNCS 4224, pp. 1087 – 1094, 2006, DOI: 10.1007/11875581\_129. Here is an example:

AI Techniques for COVID-19

IEEE Access (2020) - 2 Comment

doi: 10.1109/access.2020.3007939 issn: 2169-3536

Adedoyin Ahmed Hussain, Ouns Bouachir, Fadi Al-Turjman, Moayad Aloqaily

#1 N. H. Wis

This paper already has 34 citations, I guess because Covid-19 and AI are both very hot topics, but appears to have been written using a thesaurus engine to avoid plagiarism detection.

The abstract alone contains the tortured phrases 'neural systems' for 'neural networks', and 'edge significant learning', which only gives 10 results on Google, most of which are for this paper.

The first paragraph of the introduction is in unusual language and contains telling incorrect definitions of abbreviations, such as 'mad-made brainpower (AI)', and ends with 'Meanwhile, Insilico Medicine situated in Hong Kong as of late declared that it's AI calculations had planned six new atoms that could end viral replication'.

The rest of the introduction is in a similar style and contains the tortured phrases 'twofold tree' (for 'binary tree' for 'dual tree?') and 'convolutional neural system (CNN)'.

Many other sections of the paper contain tortured phrases and nonsensical sentences, suggesting much of the paper has been plagiarised

[Report](#) [Permalink](#) [Reply](#)

#### #2 *Salsola Zygophyl*

This paper contains a prime example of thesaurus gone wild: "extreme intense respiratory disorder (SARS)". Given that those who use the PubPeer browser plugin are going to be directed to this page whenever this paper turns up in a search or on a web page, it seems both fair and useful to ask the authors: What contribution to knowledge do you think you have made with this publication? The same question could fairly and usefully be asked of those who cited it. 

# Tortured Phrases related to nanobio

## Polymers, responsiveness and cancer therapy

Artificial Cells Nanomedicine and Biotechnology (2019) - 1 Comment  
doi: 10.1080/21691401.2018.1559176 issn: 2169-1401 issn: 2169-141x pubmed: 30688110

Anil M. Pethe, Khushwant S. Yadav

### #1 N. H. Wise

This paper contains tortured phrases suggesting the use of a thesaurus engine to avoid plagiarism detection. Specifically, it refers to 'corrosive' instead of 'acid', leading to:

- 'nucleic corrosive' - nucleic acid
- 'acrylic corrosive' - acrylic acid
- 'phosphoric corrosive' - phosphoric acid

## Low cost Covid-19 preliminary diagnosis utilizing cough samples and keenly intellective deep learning approaches

Alexandria Engineering Journal (2021) - 1 Comment  
doi: 10.1016/j.aej.2020.09.032 issn: 1110-0168

D. Sudaroli Vijayakumar , Monica Sneha

### #1 N. H. Wise

This paper contains phrases that suggest the use of a thesaurus engine to avoid plagiarism detection. Examples include:

- 'Nucleic Corrosive Enhancement Tests (NAAT)' - Nucleic acid amplification tests
- 'real-time Turn around Translation Polymerase Chain Response (rRT-PCR)' - real-time reverse transcription polymerase chain reaction
- 'flag to clamor' - signal to noise
- 'sifted flag' - filtered signal

Despite the paper being on 'cough', 'cough' only appears in the title, abstract and **once** in the body of the text. Instead, 'hack' appears over 40 times, including in section titles.

## Cloud-Based Breast Cancer Prediction Empowered with Soft Computing Approaches

Journal of Healthcare Engineering (2020) - 1 Comment  
doi: 10.1155/2020/8017496 issn: 2040-2295 issn: 2040-2309 pubmed: 32509260

Farrukh Khan, Muhammad Adnan Khan , Sagheer Abbas, Atifa Athar, Shahen Yamin Siddiqui, Abdul Hannan Khan, Muhammad Anwaar Saeed, Muhammad Hussain

### #1 Diradops Cardena

This article shows clear evidence of 'tortured phrases'. To give a few examples:

- **bosom malignancy** (breast cancer)
- **Preparing** (preprocessing)
- **crusty logic** (crisp logic, a term anyone who is writing a paper on fuzzy logic could be expected to know!)
- **imitation** (simulation)

Considering that this paper deals with the clinical applications of ML for a potentially fatal disease, it's rather inappropriate and dangerous that it slipped past controls.

There's also a lot of extremely trivial maths, which appears to have been included for no other purpose than to 'bulk up' the paper (see eqns. 5-10, which might be appropriate in a high school textbook but not an academic paper).

Tortured Phrases as a tip from an informant...

Tracking retractions as a window  
into the scientific process

# 'Tortured phrases', lost in translation: Sleuths find even more problems at journal that just flagged 400 papers

What do subterranean insect provinces and motion to clamor have to do with microprocessors and microsystems?

That's an excellent question. Read on, dear reader.

Earlier this month, as we reported, Elsevier announced that it had concerns about some 400 papers published in special issues in one of its journals. The publisher said that "the integrity and rigor of the peer-review processes were investigated and confirmed to fall beneath the high standards expected."

Guillaume Cabanac

Update, 1140 UTC, 7/21/21: An Elsevier spokesperson gave us this statement:

*The Editor in Chief of Microprocessors & Microsystems has serious concerns about the integrity and rigor of the peer-review processes that led to the publication of over 400 papers in six Special Issues, as previously reported. Investigation and due process regarding individual articles published in these Special Issues is ongoing. To date, our investigations indicate the likely extensive use of reverse translation software to disguise plagiarism, as suggested by Drs Cabanac, Labb  and Magazinov's analysis. We appreciate the authors helping bring this issue to light. We will provide further updates in accordance with Elsevier and the Committee on Publication Ethics best practices once the investigations have concluded.*

## Case 2: Arabian Journal of Geosciences (Springer)

The official journal of the Saudi Society for Geosciences, the Arabian Journal of Geosciences examines the entire range of earth science topics focused on, but not limited, to those that have regional significance to the Middle East and the Euro-Mediterranean Zone.

### Springer Nature slaps more than 400 papers with expressions of concern all at once

Cartoon by Hilda Bastian ([license](#))

A total of 436 papers in two Springer Nature journals are being subjected to expressions of concern, in the latest case of special issues — in this case, “topical collections” — likely being exploited by rogue editors or impersonators.

<https://retractionwatch.com/2021/09/28/springer-nature-slaps-more-than-400-papers-with-expressions-of-concern-all-at-once/>

#### Use Case: the Arabian Journal of Geosciences

► August 23, 2021: Eracon Lachesis and Alexander Magazinov reported on PubPeer issues with a publication from *Arabian Journal of Geosciences*. See this annotated example:

Without transition, just concatenated!

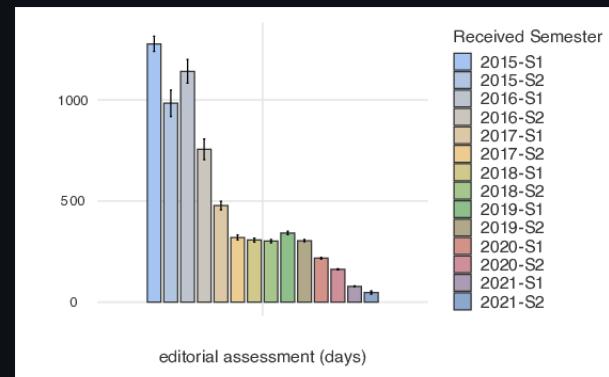

In recent years, with the progress of industrialization, human demand for natural resources has increased, China's environmental degradation, and the management and treatment of volatile organic pollutants, etc., will not only become the cause of ozone pollution, but also have a huge impact on human health. In response to this problem, China issued the "Twelfth Five-Year Plan on Air Pollution Prevention and Management in Major Regions" in 2012, which for the first time clearly pointed out the policy on the management of volatile organic pollutants and the strengthening of corporate production, and management of volatile organic pollutants during transportation. Increase the use of low-volatile organic solvents, reduce the use of high-volatile organic solvents, promote the management of organic waste gas pollution, and strengthen the recovery and utilization of organic waste gas. Establish a monitoring system for volatile organic pollutants in major industries and improve the emission standards for volatile organic pollutants.

Latin dance is a dance sport introduced to China in 1980, and now China holds Latin dance competitions every year. From an aesthetic point of view, Latin dance is a kind of artistic performance. Skilled Latin dance dancers during the performance can bring wonderful beauty to the audience and stimulate people's love for this dance movement. Based on the summary of the related content of Latin dance art performance, this article further analyzes the current situation and development trend of Latin dance art performance, hoping to provide some valuable reference materials to promote the development of Latin dance art in China. Through survey methods such as questionnaire surveys and expert interview methods, the artistic performance of Latin dance is investigated.

We observed an impressive and questionable shrinking of the duration of editorial assessments:

- 282 days in 2019-S2
- 159 days in 2020-S2
- 47 days in 2021-S2

► September 28, 2021: Springer published Expressions of concern for 436 publications in the *Arabian Journal of Geosciences*.

3. Peer Review Hacking
4. Paper Mills
5. Citation Hacking

We must decontaminate the scientific literature

Villains: scammers who are pseudo-authors

Motive: promotion, recognition, symbolic capital

Modus operandi: plagiarism, journal hijacking, buying of citations

Consequences: pollution of the literature  
erosion of the trust society places in science

Detectives: professional and scientists and hobbyists  
volunteers contributing *pro bono*

Aim: curative → decontaminate the literature  
preventive → anticipate new manipulations

Means: Decentralised re-assessment supported by the  
*Problematic Paper Screener*  
AI to detect errors, paraphrasing, data fabrication

## China's Publication Bazaar

A Science investigation has uncovered a smorgasbord of questionable practices including paying for author's slots on papers written by other scientists and buying papers from online brokers

**"IT'S UNBELIEVABLE: YOU CAN PUBLISH SCI PAPERS WITHOUT DOING EXPERIMENTS."**

# THE BATTLE AGAINST PAPER MILLS

Some journals have admitted to a problem with fake research papers. Now editors are trying to combat it. By Holly Else and Richard Van Noorden

### Industrialized cheating

The problem of organized fraud in publishing is not new, and not confined to China, notes Catriona Fennell, who heads publishing services at the world's largest scientific publisher, Elsevier. "We've seen evidence of industrialized cheating from several other countries, including Iran and Russia," she told *Nature* last year. Others have also reported on Iranian and Russian paper-mill activities.

In a statement this year to *Nature*, Elsevier said that its journal editors detect and prevent the publication of thousands of probable paper-mill submissions each year, although some do get through.

China has long been known to have a problem with firms selling papers to researchers, says Xiaotian Chen, a librarian at Bradley University in Peoria, Illinois. As far back as 2010, a team led by Shen Yang, a management-studies researcher then at Wuhan University in China, warned of websites offering to ghostwrite papers on fictional research, or to bypass peer-review systems for payment. In 2013, *Science* reported on a market for authorships on research papers in China. In 2017, China's Ministry of Science and Technology (MOST) said it would crack down on misconduct after a scandal in which 107 papers were retracted at the journal *Tumor Biology*; their peer reviews had been fabricated and a MOST investigation concluded that some had been produced by third-party companies.

Physicians in China are a particular target market because they typically need to publish research articles to gain promotions, but are so busy at hospitals that they might not have time to do the science, says Chen. Last August, the Beijing municipal health authority published a policy stipulating that an attending physician wanting to be promoted to deputy chief physician must have at least two first-author papers published in professional journals; three first-author papers are required to become a chief physician. These titles affect

# For Better Science

In China, clinicians are expected to publish a certain number of research papers in international journals if they want to be promoted. The easiest way is to pay a paper mill, which seem to provide a full service: an English-speaking research paper containing Photoshop-generated fake research data, in a respectable peer-reviewed journal, with your name on it. Entire journals published by Wiley or Elsevier succumb to such scams, presumably because certain corrupt editorial board members are part of it. This was uncovered in an investigation by [Elisabeth Bik](#), as well as the pseudonymous [Smut Clyde](#), [Morty](#) and [Tiger BB8](#), and narrated below by Smut Clyde.

The presently **almost 500 papers** were traced to one specific paper mill not because of direct image reuse, but because the data showed same patterns of falsifications: same blot backgrounds, same shapes of bands, and similarly falsified flow cytometry plots.

**Morty** @mortenoxe · Jan 20, 2020

Published by Wiley, indexed by the US National Library of Science, and read by scientists. Paid by public funds, all profit to the publisher and some laughter in China. [#BetterJournalIndexing](#) [#PubPeer](#) [#NIH](#) [#Wileyinresearch](#)

Re #4. M. Elhoseny is part of the 2021 annual list of **Highly Cited Researchers™** from Clarivate™ "recognizing influential researchers in the sciences and social sciences from around the world".

<https://web.archive.org/web/20211116210755/https://publons.com/researcher/1196537/mohamed-elhoseny/>

As stated by Clarivate™:

- "All Highly Cited Researcher records are reviewed. Factors such as retractions, misconduct, and extreme self-citation—all of which would detract from true community-wide research influence—may lead to an author being excluded from the list."
- "There is no unique or universally agreed concept of what constitutes exceptional research performance and elite status in the sciences and social sciences. Consequently, no quantitative indicators will point to a list that satisfies all expectations or requirements."

While producing between 40 and 60 papers a year according to Scopus, he also managed to review up to almost one paper per day for several journals in 2018.

**Important of price forecasting.** Over the recent years, modern technologies<sup>[1–10]</sup> shows more potential as view of electricity industry relaxation<sup>[1–10]</sup> which leads to clear market without an extra force<sup>[11–26]</sup>, therefore, the number of market participants is increased since they freely accessed to market information<sup>[9]</sup>. Owing to the participants growing and the intense competition forces, the first, fast and correct decisions will be necessary for both enterprises and academia to maximize profit which itself needed to more accurate information of electricity price<sup>[27–41]</sup>. Owing to the uneconomical way for energy storage<sup>[42–47]</sup> in large-scale and its decency to different factors such as holidays<sup>[48–55]</sup>, sudden disturbance in transmission and generation power systems, celebrations, seasons etc.<sup>[53–55]</sup>, the electricity price forecasting will be more difficult than any other financial markets<sup>[56–63]</sup>. In other words, electricity markets price are the result of the intersection of supply and demand curves<sup>[64–70]</sup>. The supply demand directly affects by weather conditions and general economy behaviors. In supply side, prices of fuel i.e. gas, coal, oil, etc. and unexpected fails also plays an important role<sup>[71–76]</sup>. As result, Fig. 1 shows a graphical view of important factors which directly affects on power prices. It is clear that these factors make fluctuations in electricity price signals.

## Errors in genetic sequences mar hundreds of studies

Misreported nucleotide reagents may be rife in papers on human gene function.

Holly Else

A computer-aided analysis of almost 12,000 human-genetics papers has found more than 700 studies with errors in the DNA or RNA sequences of their experimental reagents<sup>1</sup>. That amounts to a “problem of alarming proportions”, because it suggests that a worrying fraction of studies on human genes are not reliable, says the team that conducted the analysis, led by cancer researcher Jennifer Byrne at the University of Sydney in Australia. The mistakes could be accidental but, researchers suspect, might sometimes point to fraud.
